SUMMARY

Lead engineer with **14+ years** driving technical roadmaps, cross-team architecture decisions, and distributed systems at scale. Led teams of up to **12 engineers**, delivered **30× latency gains** and **\$250K+ in cost savings**. Proven track record of setting technical direction — defining system design standards, API contracts, and observability patterns — that scaled beyond individual teams. Deep hands-on expertise in distributed systems, gRPC, cloud infrastructure (AWS, Kubernetes), and security engineering, with a demonstrated ability to translate complex architectural decisions into measurable business outcomes.

CORE SKILLS

Languages: Java, Kotlin, Python, Go, Node.js, TypeScript, C · **Frameworks:** Spring Boot, Spring MVC, Swagger/OpenAPI · **Cloud & Infra:** AWS (SQS, Lambda, DynamoDB, etc.), Kubernetes, Kafka, Spinnaker · **Protocols:** gRPC, REST, mTLS, SSH, LDAP · **Observability:** Datadog, Splunk · **Testing:** Gatling, JUnit · **DB:** Oracle RDBMS, MongoDB

WORK EXPERIENCE

Lead Software Engineer | EPAM Systems → Expedia Group (Advertiser Platform)

Mar 2024 – Jun 2026

- Led **12 engineers** across multiple locations; owned end-to-end technical roadmap and architectural direction, system design reviews, CI/CD pipelines, and technical leadership across Media Solutions Publisher & Advertiser teams.
- Re-architected inventory forecasting (data sharding, pre-computation, async parallelism, algorithm optimisation) — **150s → 5s (30×)**, saving **\$65K/year**.
- Designed REST APIs and gRPC services for Flight Search Listing and advertiser targeting; used Kafka for real-time event streaming; established Gatling load-testing (3× TPS) and Datadog/Splunk observability standards.
- Established API design standards, ADRs, and observability patterns adopted across 3 platform teams beyond the immediate squad; mentored senior engineers on system design, scalability, and distributed systems tradeoffs.

Tech: Kotlin, gRPC, REST, Spring Boot, Kafka, Datadog, Spinnaker, Splunk, Gatling, Kubernetes

Lead Software Engineer | EPAM Systems → Amazon AWSMP (Seller Onboarding)

Sep 2022 – Mar 2024

- Led **6 engineers**; delivered Legal Representative Verification and Bank Account Verification — REST APIs on event-driven SQS/Lambda with idempotency, DLQ, and callback webhooks.
- Executed zero-downtime seller registry migration across 3 services via dual-write strategy.

Tech: Java, Spring MVC, REST, AWS (SQS, DynamoDB, Lambda, etc.), JUnit, TypeScript

Software Engineer | Prismo Systems

Jul 2021 – Jul 2022

- Built backend API to collect telemetry data from cloud cluster nodes and transfer to analytics engine for anomaly detection (Node.js/MongoDB); gRPC-based RBAC access control API (Go) for multi-tenant cloud.

Tech: Node.js, Express, MongoDB, gRPC, Go

Senior Member of Technical Staff | Oracle

Dec 2015 – Jul 2021

- 66% downtime reduction** (~90 → ~30 min/host): custom Python scheduling algorithm for Oracle Public Cloud control plane upgrades using dependency-graph-based host ordering.
- 20% cost reduction (~\$190K)**: Cloud at Customer control plane migration to public cloud; cut setup from 3–4 months to weeks.
- Architected mTLS-based inter-service security standard adopted across Weblogic-deployed REST backends in Oracle Cloud — covering certificate lifecycle, mutual authentication, and automated rotation; delivered DB lifecycle management and Firewall lifecycle APIs for OCI.
- Enhanced Enterprise User Security Manager with SSL/LDAP (OID) — 20% overhead reduction; implemented regex-based column-level masking in Oracle DB engine (C, PL/SQL, GDB).

Tech: Java, Python, REST, RDBMS, YAML, Swagger/OpenAPI, Jersey, Dropwizard, Weblogic, mTLS, C, PL/SQL, LDAP, TLS

Tech Lead | Alcatel-Lucent

Dec 2014 – Nov 2015

- CIS-compliant OS hardening for Small Cell Gateway (Bash/Linux); QA team mentoring and test standards.

Software Engineer | Cisco Systems

Dec 2011 – Dec 2014

- Product Security Baseline for Data Center switches (C, PAM, Linux): password mgmt, SSH hardening, OpenSSH for VDCs; **30%+ security improvement**; CVE analysis on OpenSSL, SSH/SSL/LDAP.
- NIST-SP & Common Criteria gap analysis (**30% delivery improvement**); cryptography training. **White & Green Belt in Security**.

Tech: C, PAM, OpenSSH, OpenSSL, Linux, Cryptography

EDUCATION

B.Tech, Information Technology | NIT Durgapur

2007 – 2011
